Subject: questions on remedy concept

Hi Kristine,

Are you available to chat briefly about the remedy concept? I would find it very helpful to hear a little more about the process you used to determine which SDUs to apply non-Alternative E RALs to. Maybe we could talk through one of the SDUs that are now assigned B RALs + PTW to highlight, for instance, why increasing the RAL wouldn't have a big effect on residual risk. I know that this is a complicated topic that depends on how much PTW is in an SDU, the COC concentrations relative to the RALs, the size of the RAL footprints relative to the SDU footprint, etc. However, I would find it helpful to at least conceptually walk through an example.

Do you have any time tomorrow morning? I'm free until 11:30. If not then, maybe Thursday morning?

Thank you.
